| 05 | Yomo | 2025 · Concept · Visual Identity, UX/UI, Product |  |
| | A personalized food-navigation platform for people with dietary restrictions. | | |

Editorial Spine

This submission is structured as a portfolio process book rather than a loose compilation of final boards.

Each project opens with the brief and strategic approach, moves through evidence of exploration and development, and closes with outcomes or current-state documentation.

The draft uses existing case-study copy and local project assets so the Figma refinement pass can focus on curation, pacing, and visual polish.

Gaia

2026 · Self-initiated · ArtCenter CD5

A reimagining of iNaturalist into a more welcoming brand and product system for biodiversity conservation.

Introduction

Process

Outcomes

Brief / Challenge

iNaturalist is powerful but intimidating. The challenge was to preserve the depth of a citizen-science platform while making the invitation broader, warmer, and easier to enter.

Conceptual / Strategic Approach

Rename and reposition the platform as Gaia: a living system where every species, observation, and person belongs to one larger story. The design strategy focused on access, motivation, and meaning.

Research + Exploration Evidence

The Gaia source deck already contains a long exploration arc. These contact sheets preserve breadth while keeping the assignment PDF under 100 pages.

Identity System Development

Logo, typography, color, and iconography become the connective tissue between brand story and product behavior.

Prototype Behaviors

Motion-heavy app moments are represented as still frames here; the source videos remain available for a Figma Slides refinement pass.

Core App Screens

The final product direction combines onboarding, finding, logging, storytelling, and profile impact into one coherent iOS experience.

Brand Applications

The system expands beyond the app into print and environmental applications.

Outcome + Documentation

Full brand identity, product system, iOS app direction, species/data cards, UI flows, and application touchpoints.

- Renaming and identity system tied to product strategy
- UI work mapped to access, motivation, and meaning
- Prototype/app documentation can be expanded in Figma

Motion

Connect

2025 · ArtCenter · Visual Identity, 2D Motion, Editorial

A kinetic event identity for ArtCenter's Motion Connect speaker series.

Introduction

Process

Outcomes

SIMON CLOWES

ITAY TEVEL

CATHY XIAO

BON ZHANG

Brief / Challenge

Motion Connect needed a cohesive identity system that could stretch across talks, social assets, print collateral, speaker graphics, and motion reels.

Conceptual / Strategic Approach

Use the joy of 80s arcade graphics as a visual engine: monolithic typography, electric color, bold pacing, and modular motion behaviors that could scale across many deliverables.

Kinetic Language Tests

The system is built from motion studies, typographic weight, and fast color shifts rather than a static logo-first identity.

After Effects + Social Development

Process evidence includes working files, zoomed social artifacts, and typographic animation tests.

Event Environment

The identity had to survive outside the screen: speaker graphics, venue photography, and social recap material all had to feel related.

Campaign Deliverables

Horizontal and vertical mockups show how the identity translates into campaign-facing assets.

Documentation + Live Context

Event photos document the identity in use and give the final system a community context.

Outcome + Documentation

Flexible motion and editorial system supporting social, keynote graphics, print, event photography, and a final motion reel.

- System designed for repeated speaker/event use
- Motion stills stand in for video in the PDF
- Figma pass should choose whether to embed original clips

Simon & Schuster

2025 · Concept · Brand Strategy · Visual Identity, UX/UI · Fonts in Use Feature

A strategic rebrand concept for Simon & Schuster rooted in independence, editorial openness, and diverse voices.

Introduction

Process

Outcomes

Brief / Challenge

After the DOJ blocked Penguin Random House's acquisition, Simon & Schuster's independence became a strategic opportunity rather than a neutral business fact.

of UK publishing staff report
mental burnout.

was generated by the Big Five
publishing firms in 2022.

of the publishing workforce
identify as Caucasian

of all American books are owned by the
Big Five publishing firms.

Conceptual / Strategic Approach

Build an identity around editorial openness:
a publishing culture that treats controversy
as an invitation. The system needed to
work across imprints, authors, campaigns,
physical touchpoints, and digital
experiences.

Strategic Context + Early Framing

The project begins with the business context and uses that opening to build a sharper argument for independence and editorial openness.

The Publishing Industry Faces Dwindling
Publishing Workers are Facing Our
Rapid Consolidation - Less Diversity in Thought
New Writers - Have a Hard Time Getting Noticed
Online Marketplaces are Hurting Publishing

Manifesto + Mark System

The system moves from core idea to typographic tone, identity language, and author-facing expression.

Hierarchy + Imprints

Development extends into division, imprint, and author marks so the identity can support a complex publishing house.

Publication + Physical Touchpoints

The identity is tested across books, postcards, tape, banners, apparel, and environment.

Campaign Applications

Poster systems and campaign work show how the brand can participate in cultural conversation.

Outcome + Documentation

Brand strategy, identity system, publication/touchpoint design, motion studies, division and imprint marks, and campaign applications.

- Concept framed honestly as speculative academic work
- Strongest evidence is the breadth of brand-system applications
- Recognition note can be moved earlier if needed

Karuna

2025 · Concept · Visual Identity, Packaging, Product

A product-line identity for Karuna's Highland Harvests bee-derived goods.

Introduction

Process

Outcomes

Brief / Challenge

Karuna supports Tai Dam communities in Northern Vietnam through sustainable beekeeping. The product line needed to communicate craft, land, biodiversity, and social enterprise without becoming generic impact branding.

Conceptual / Strategic Approach

Center the relationship between people, landscape, bees, and material craft. The visual system balances warm packaging, tactile product photography, pattern, and restrained identity elements.

Material + Place

The direction is grounded in landscape, warm materiality, and product photography rather than generic social-enterprise cues.

Typography, logomark, wordmark, and pattern studies establish the kit-of-parts for the product line.

Product Set Development

The product family covers honey, beeswax candle, and food wrap, with a visual system flexible enough for each format.

Packaging + Product Family

The final family needs to read as one ecosystem while letting each product remain clear.

Photographic Documentation

Final photography provides scale, tactility, and the proof that the packaging can live in the world.

Outcome + Documentation

Identity, typography, pattern system, packaging, product mockups, and photographic documentation for honey, beeswax candle, and biodegradable wrap.

- Packaging and product photography carry the outcome section
- Process can be expanded with sketches or material tests
- Social-impact context should stay concise and specific

Yomo

2025 · Concept · Visual Identity, UX/UI, Product

A personalized food-navigation platform for people with dietary restrictions.

Introduction

Process

Outcomes

Brief / Challenge

Dietary restriction tools often feel clinical or fragmented. Yomo needed to connect recipes, restaurants, groceries, and wearable contexts in a way that felt usable every day.

Conceptual / Strategic Approach

Create a warm, specific product language: accessible enough for daily food decisions, structured enough to be genuinely useful across mobile, desktop, and smart glasses.

Research + User Model

Yomo's process starts with restrictions, persona needs, and the structure of food decisions across contexts.

Wireframes + System

The product language becomes useful when research turns into repeatable UI patterns and interaction states.

Prototype + Interaction Studies

Desktop and mobile motion tests are reduced to stills for the PDF; the videos remain source material for the Figma deck.

Mobile + Desktop Product

Yomo connects food restrictions to recipes, restaurants, grocery decisions, and cross-device use.

Smart Glasses + Brand Applications

The concept extends into wearable guidance and brand-facing touchpoints.

Outcome + Documentation

Visual identity, research framing, personas, wireframes, design system, UI screens, desktop and mobile flows, smart-glasses scenarios, and prototype assets.

- Clear UX arc from research to wearable scenarios
- Design-system slides support maintainability
- Current draft works as mid-term / in-progress documentation

Submission Notes

This draft is intentionally editable: text is live in PowerPoint, and image placements are separated by slide.

For Figma Slides, import the PPTX, review type conversion, then replace still frames with the original videos where motion is essential.

The final PDF can be exported from Figma Slides once the visual refinement pass is complete.
